## What Happened

The Chest X-Ray analysis detected features consistent with a normal chest X-Ray with 71.2% confidence.

## Why It Happened

The risk level is classified as LOW RISK, indicating that there are no significant abnormalities detected in the chest X-Ray.

## What To Do Next

- Schedule a follow-up appointment with your primary care physician for further evaluation and monitoring.
- Continue to follow a healthy lifestyle, including regular exercise and a balanced diet.
- Get vaccinated against flu and pneumonia to reduce the risk of respiratory infections.

## Specialist Recommendations

- Pulmonologist - To evaluate lung function and rule out any underlying respiratory conditions.
- Cardiologist - To evaluate heart rhythms and rule out any underlying cardiac conditions.

## Health Recommendations

- Avoid smoking and secondhand smoke exposure to reduce the risk of respiratory diseases.
- Get enough sleep and manage stress to boost your immune system.
- Stay hydrated by drinking plenty of water to help your body function properly.
